

Safety and comfort on high seas

KAEFER Shipbuilding is represented at many shipyards in Europe. The services on offer range from engineering, i.e. the technical planning of projects, up to the production and delivery of materials, fitting and installation. Service and maintenance are also offered. KAEFER technicians work on all type of ships: cruise liners, ferries, yachts, megayachts, container ships, tankers, navy and research vessels, and special-purpose vessels. Not all of this work is on new buildings. Many ship-owners and yards count on KAEFER for the refurbishment and modernisation of cruise ships. KAEFER technicians construct and install walls, ceilings and flooring- and door systems for ship interiors and exteriors.
