The **University of Applied Sciences Kiel** is one of the leading institutions for the qualification of bachelor and master engineers in the fields of ship building, maritime technology and offshore industrial engineering. Located in a core region of the German shipbuilding industry, Kiel University holds close connections to shipyards, engineering offices and subsuppliers to support academic-industrial technology exchange and offer various research- and development projects. With these activities it offers an encompassing wealth of knowledge and experience to its students and industrial partners.

The institute for shipbuilding technology comprises 4 full-time professors and 5 scientific employees engaged in the towing tank, wind channel and laboratories for strength- or CAD- applications. These competences are supported by further professors for mechanical engineering and offshore technology as well as campus faculties for electrical engineering, economy affairs and communication medias.

For R&D projects the university-assigned Forschungs- und Entwicklungszentrum FH-Kiel GmbH, the YRU (Yacht Research Unit), the IMST (material and surface technology) and the CIMTT (computer integrated manufacturing) are prime addresses for technology transfer or complete project solutions.
